### **Fire Safety Policy**

1. **Fireguard Requirement:** Each camp which contains a fire at ground level or above ground in a firepit must have an assigned Fireguard to monitor the fire and if necessary, extinguish the fire. The Fireguard must be of sound mind and judgment while performing their duties as Fireguard. The Fireguard may appoint others to serve as Fireguard for them, provided that the other person is aware of their responsibilities.
2. **Extinguishing Device:** Each camp which contains a fire at ground level or above ground in a firepit must have a means to extinguish the fire quickly. This device must be self-contained such as a fire extinguisher or a bucket of water which must also be within 6ft of the fire.
3. **Fire Management Protocol:** When managing a campfire, strict adherence to guidelines is essential, including the responsible use of accelerants, ensuring only safe to burn items are incinerated, abstaining from tending to the fire while under the influence of substances, and refraining from relocating a lit fire. These measures are vital to mitigate potential hazards and ensure the safety of all individuals present.
4. **Safety Team Enforcement:** The Safety Team reserves the right to implement this policy strictly and may increase the requirements if they deem it necessary and appropriate.
